Count on the Performance and Security of a Custom Cloud

Keep data and applications in your own company cloud.

If you're in a security-conscious industry—such as insurance, finance, accounting, legal, or healthcare—Xantrion Managed Cloud provides an ultrareliable, scalable solution for data and application hosting and management. Designed to provide uncompromising security and speed, our Managed Cloud service is the gold standard for off-site, private network solutions.

Depend on our team to help, as well as host.

Unlike other hosting providers, we take a consultative approach to cloud strategy. Our cloud computing experts analyze your requirements and create a custom cloud-based solution that meets your specific security, continuity, and regulatory needs.

Simplify and secure your corporate cloud.

Whether your company is subject to regulatory compliance or you'd simply like to streamline IT management, Managed Cloud takes the burden of IT administration off your plate. We'll ensure you employ the latest security measures, have the speed and capacity your organization requires, and receive prompt, professional support 24/7. In addition to reliable support, you also have dependable charges—you pay for only what you use.

Choose our state-of-the-art, security-certified data centers.

Our data centers and cybersecurity practices are independently audited and certified. Our hosted servers and applications, internal security, and business continuity practices meet the industry's highest standards. We hold a SOC 2 Type II certification, awarded by AICPA Service Organization Control Reports.

Explore the benefits of Managed Cloud.

CIO-level consulting

Network design and security analysis, from your hosted servers to the offices and PCs connecting to them

Disaster preparedness, regulatory compliance, and software implementation strategy

Regular IT reports and performance reviews

Xantrion Managed Cloud provides a reliable, scalable solution for data and application hosting that meets any regulatory or due diligence requirement.

Turnkey security and compliance services for nontechnical firms

We have years of experience working directly with business managers

You describe your business, security, and compliance needs; we translate them into a technical design

We manage all system implementations and data migrations

We assume responsibility for the ongoing operation and security of your systems

Service level, privacy, and data ownership agreements

We provide a 100% system-availability guarantee

Your data resides in our secure US-based data centers

All individuals who can administer your system can be identified and have background checks

If you cancel, your data will be returned to you and removed from our systems promptly

State-of-the-art network design and data center facility

Redundant equipment, power, and Internet connections; built-in business continuity capabilities

Air-conditioned, hardened facility with equipment-friendly fire systems

Multiple layers of security and encryption; SOC2 Type II certified and PCI compliant

Data security

Data resides in a virtual private network

Your data is completely isolated from other companies' data

24/7 cloud team availability
