“I’ve worked in large companies with extensive IT teams, and they pale in comparison to what I’ve seen Xantrion accomplish.”

ADVISOR
WEALTH MANAGEMENT FIRM

Forward-thinking solutions and superior execution have made us one of the top 50 providers of IT services worldwide.

Great service begins with exceptional people.

From our CIO-level consultants to our help-desk engineers, the Xantrion team is designed to be an extension of your organization. We provide the leadership, communication and execution expertise to support day-to-day information technology operations as well as major infrastructure upgrades or security and compliance initiatives. We hire only the most trustworthy and high-caliber candidates. As a result, our team is recognized as premium partners of Microsoft, VMware, Citrix, HP and Dell—a testament to our technical expertise and customer satisfaction.

Security, privacy, and compliance are at our core.

At Xantrion, security, privacy, and compliance are built into every service we offer. We hold a SOC 2 Type II security certification, confirming that our hosted servers and applications, internal security, and business continuity practices all comply with current best practices. Our clients—who have certification and compliance requirements of their own, such as HIPAA and PCI DSS—may rely on our SOC 2 Type II report as part of their own compliance strategy.

Execution excellence is fueled by processes and tools.

We have developed proprietary systems and best practices that enable us to make IT work for you. The Xantrion IT Roadmap™ is the methodology we use to define and advance your IT strategy and plan. The Xantrion Security System™ is a proprietary software tool designed to identify and minimize security and data backup blind spots. The Xantrion Technology Platform™ is a combination of fully vetted technology solutions and best practices that maximize performance. The Xantrion Managed Service Standard™ is a proven set of IT support practices that increase end-user satisfaction while reducing costs.

Our data centers and cybersecurity practices are independently audited and certified.

“It’s all about the peace of mind of knowing we have a plan in place for any emergency.”

IT Roadmap

To get started, one of our CIO-level team members will evaluate your IT resources, processes, and budget then recommend appropriate changes based on best practices and organizational needs.

Complete Care

Our team of professionals provides your organization with comprehensive technical support—from IT budgeting and planning to 24x7 help-desk services—all for a fixed fee.

Managed Mobility

Our experts plan, deploy, and manage solutions that synchronize employees' applications, online services, and data making it easy to move between devices and locations seamlessly and securely.

Managed Continuity

Our business continuity services keep your organization operating smoothly by mitigating or preventing data loss and business interruptions—from a single corrupted file to a regional disaster.

Managed Cloud

With our reliable, scalable hosting services, your servers and applications reside in a private cloud and can be accessed through a secure portal. We can also manage your public cloud.

Advanced Security

In addition to security measures included with Complete Care and Managed Cloud, our team deploys a system of checks and balances that eliminates blind spots and keeps data safe from continually evolving cyberattack strategies.
